Configuring the Remote XUL Manager

After installing the Remote XUL Manager, navigate to Tools->Web Developer->Remote XUL Manager.

A window will appear asking you to add the domains with XUL permission. Enter plantools.budget.upenn.edu. Click Ok and then close the Remote XUL Manager window. **NOTE:** For Firefox 42 and above the scheme (http or https) is now required (https://plantools.budget.upenn.edu/workspace/index.jsp, for example).
